v. Letter of Transmittal

The Director

SGSITS

Indore (M.P.)

March 1, 2021

Ref No - SGSITS/42069/2021

Respected sir,

Subject - Letter of Transmittal on 'Disturbance to Natural Order'

This letter is in reference to your no. SGSITS/42069/2021 in which you have asked us to make an analytical study on distortion, is the natural order. We would like to present our finding and recommendations

concerning the same. We hope that this report will give you an insight of how grave the matter of Disturbed Natural cycle is.

We hope that this report grants enough information that facilitates proper decision-making.
Yours faithfully

vi. Preface *Tanmay Mehta*

This report aims to analyze the increasing disturbances caused by human activities to the natural cycle of the earth, and how it affects us and all the other living beings. It also charts out the possible solutions, and points out the ways to counter the issue, it has become the greatest threat to World at the moment. Suggestions and critiques from the readers are appreciated.

vii. Acknowledgement

I would like to express thanks and gratitude to all those who have helped me in the preparation of this report. I would like to thank our Director for providing me this opportunity. Special thanks to Mrs. Sarika Tiwari and all other

Teachers to guide me, and solving the problems that occurred during formation of this report I would also like to take the opportunity to thank my parents and friends whose constant support and guidance made this report a possibility

x. Abstract/ Summary

All the four orders of nature are i.e. Material, plant, human and animal order are interconnected and mutually dependent. It is very important that all the orders work in sync with each other, so that the nature cycle is balanced. In today's modern world this harmony is disturbed due to an ever growing human population and demand. Our energy needs are growing day by day, which results in disturbance in the cycle of life. Humans are taking way more than they provide to nature.

2. Main Text:

xi. Introduction

Environmental degradation is the deterioration of the environment through depletion of resources such as air, water and soil; the destruction of ecosystems; habitat destruction; the extinction of wildlife and pollution. It is defined as any change or disturbance to be deleterious or undesirable. The loss of biodiversity has been attributed in particular to human overpopulation.

xii.

Discussion

Environmental degradation has become a 'common concern' for humankind since over the past few decades nature is losing its battle against the flourishing humans that is dominating the flora and fauna for over a century.

One of the major components of environmental degradation is depletion of freshwater on earth. 69% of freshwater is frozen in ice caps and only 2.5% of 30% of earth's water content is available for consumption. Climate change affects earth's water supply. An increase in temperature can also affect ecosystems greatly because of a species' sensitivity to temperature. The planet's human population has doubled in past 50 years and the pressure to house and feed more than 7 billion people has been enormous into previously pristine natural habitats. Land degradation is a process by which biophysical environment has been affected by humans.

The solution for this is irrefragable, but we can improve current situations, recycle, sustainable development, preservation of wildlife and forests, improve waste compaction and increase forest covers.

xiii. Conclusion

- We have been using more and more natural resources, and this has come at a cost. It's the need of the hour where human activity should be restricted, well-planned and well-managed in a way to safeguard nature.
- We humans are in a race against time, and the biggest obstruction we face is ourselves.
