

**CO10504: Computer Programming**  
**Lab Assignment #2**

Q1. Write a program to find the minimum and maximum element in an array. Take inputs and size from the user.

Q2. Write a program to reverse an array (you can take another array for this).

Q3. WAP to multiply two matrices using 2D Arrays.

Q4. WAP to check if a square matrix entered by the user (of any size  $N \times N$  : take  $N$  from the user) is a symmetric matrix or not, using 2D Arrays.

Q5. WAP to find the occurrence of a number in an integer array. For eg: if the array contains five elements {1,2,2,4,5} and the user inputs "2" the output should be 2 because it occurs two times in the array. If the element is not found, output should be 0.
